10 Top Tips!

From Kapture 24-7

**FREE
GUIDE!**

Welcome to Kapture 24-7, your one-stop solution for all your pest control needs. We are a professional pest control company based in the North East of England, dedicated to providing effective and efficient pest management services to businesses across the region and the United Kingdom. Our experienced and knowledgeable team, led by owner Thomas Brown, is committed to helping you keep your premises pest-free and in compliance with all relevant legislation.

As a business owner, you are aware of the importance of maintaining high standards of health and safety and food hygiene in your premises. Pests can pose a significant threat to these standards, and it is essential that you take proactive measures to prevent and manage any infestations. In this brochure, we will provide you with 10 top tips for effective pest control management, including a detailed overview of the relevant UK legislation.

Fast food outlets and takeaways play a vital role in the food industry, providing convenient and affordable meals to millions of people every day. However, as a business that handles and serves food, it is essential that these establishments comply with the relevant legislation to ensure the safety and well-being of their customers. One such legislation is the Food Hygiene (England) Regulations 2006, which sets out the requirements for food safety management and sets out the responsibilities of food businesses in relation to pest control.

Be Proactive...

...and understand the law!

- 1 Be Proactive:** Pest infestations can happen at any time, and it is essential to take a proactive approach to managing them. Regular inspections, cleaning, and maintenance can help to prevent pests from entering and breeding in your premises.
- 2 Understand the Law:** It is not against the law to have pests in your premises, but it is against the law not to do anything about them. The Prevention of Damage act 1949 gives local authorities the power to inspect any premises and property and force closure immediately if they find evidence of neglect or non-compliance with legislation.

Responsibilities under the Food Hygiene (England) Regulations 2006:

The Food Hygiene (England) Regulations 2006 require food businesses to take all necessary steps to ensure that the food they serve is safe to eat. This includes implementing a food safety management system, such as Hazard Analysis and Critical Control Points (HACCP), and taking measures to prevent and control pests.

Hire a professional!

Use Integrated Pest Management...

**FREE
GUIDE!**

3 Hire a Professional: Pest control is a specialized field, and it is important to work with a reputable and experienced company like Kapture 24-7. We have the knowledge, skills, and equipment necessary to safely and effectively manage any pest infestation.

4 Use Integrated Pest Management: Integrated pest management (IPM) is an approach that combines different methods of pest control to achieve long-term results. This includes using physical, biological, and chemical methods to control pests, as well as identifying and eliminating the sources of infestation.

Keep your premises clean!

Seal up entry points.

**FREE
GUIDE!**

5 Keep Your Premises Clean: Pests are attracted to food and waste, so it is essential to keep your premises clean and free from clutter. Regular cleaning and sanitation will help to eliminate potential breeding sites and food sources for pests.

6 Seal Up Entry Points: Pests can enter your premises through a variety of means, such as cracks, holes, and gaps in walls, floors, and ceilings. Sealing up these entry points will help to prevent pests from entering and breeding in your premises.

Use Pest Proofing Materials.

Monitor for pest activity.

**FREE
GUIDE!**

7 Use Pest-Proofing Materials: Pest-proofing materials, such as screens, door sweeps, and weather stripping, can be used to prevent pests from entering your premises. These materials can be used to seal up entry points and create a barrier against pests.

8 Monitor for Pest Activity: Regular monitoring can help you to detect pests early, before they become a significant problem. This includes inspecting for signs of infestation, such as droppings, nests, and damage, and monitoring for pests themselves.

Keep records and...

...be prepared!

**FREE
GUIDE!**

9 Keep Records: It is important to keep records of your pest control activities, including inspections, treatments, and results. This will help you to identify trends and patterns in pest activity and make informed decisions about pest management.

10 Be Prepared: Pest infestations can happen at any time, so it is essential to be prepared for them. This includes having a pest management plan in place, knowing who to call in case of an emergency, and having the necessary equipment and supplies on hand.

We understand that as a business owner, your time is valuable and you have many other things to worry about which is why if you contact me today I can arrange your **FREE** Initial walk around and inspection.

I am offering overnight proofing measures that will consist of the following procedures.

**FREE
GUIDE!**

1. Initial walk around and FREE inspection (no cost at this stage) if the service is required time and date can then be booked.
2. Find all entry points (internal and external) for vermin to enter premises. They will be thoroughly checked at this stage.
3. Proof (plate or mesh) so no point of entry (as many as I can find) exist anymore. Used in conjunction with Rodenticides.
4. Lay 100+ glue board to catch any vermin already inside (dispatched in a humane way)
5. A full inspection report and, if needed, further recommendations will be made.
6. All equipment that was used will be accounted for and any vermin caught will be removed and disposed of in the correct manner. Follow up visit 5-10 days later.

This takes approximately 7 to 10 hours depending on size and what needs attention with all material provided.

Price is only £250.00

(additional recommendations are not included in this price).
